TITLE: Online Quiz Management System

GITHUB LINK: <https://github.com/selvamanirangasamy-creator/TNSDC-FWD--DPI.git>

1. ABSTRACT

The Online Quiz Management System is a web-based application developed to conduct quizzes in an efficient and interactive manner. The system allows users to answer multiple-choice questions, calculates scores automatically, displays results instantly, and provides an option to restart the quiz. This application reduces manual evaluation efforts and improves the overall quiz experience for users.

2. PROBLEM STATEMENT

Traditional quiz methods require manual question handling and score calculation, which can be time-consuming and error-prone. There is a need for an automated system that can conduct quizzes, evaluate answers instantly, and display results accurately.

3. OBJECTIVES

- * To provide an online platform for conducting quizzes.*
- * To display multiple-choice questions to users.*
- * To calculate scores automatically.*
- * To display quiz results instantly.*
- * To allow users to retake the quiz using a restart option.*

4. PROJECT SCOPE

The application includes question display, answer selection, automatic score calculation, result generation, and quiz restart functionality. Future enhancements may include user login, timer-based quizzes, database integration, and performance analytics.

5. TECHNOLOGIES USED

- * HTML*
- * CSS*
- * JavaScript*
- * Visual Studio Code*
- * Web Browser*

6. APPLICATION FLOW

The user opens the application and views the first quiz question. The user selects an answer and clicks the "Next Question" button. The system checks the selected answer and moves to the next question. After all questions are completed, the final score is calculated and displayed. The user can restart the quiz by clicking the "Restart Quiz" button.

7. KEY REACT CONCEPTS USED

- * Components: Used to organize quiz sections into reusable parts.*
- * State Management: Used to store current question and score details.*
- * Event Handling: Used for button clicks and answer selection.*
- * Conditional Rendering: Used to display questions and results dynamically.*
- * Props: Used for passing quiz data between components.*

8. EXPECTED OUTPUT

Online Quiz Management System

What does HTML stand for?

- ☒ Hyper Text Markup Language
- ☐ High Text Machine Language
- ☐ Hyper Transfer Markup Language
- ☐ Home Tool Markup Language

Next Question

Online Quiz Management System

Which language is used for styling web pages?

- ☐ Python
- ☐ Java
- ☒ CSS
- ☐ C++

Next Question

9. CHALLENGES FACED

One challenge was managing the navigation between questions while maintaining the correct score. Another challenge was implementing the restart functionality without refreshing the page. These issues were resolved using JavaScript logic and proper state handling.

10. LEARNING OUTCOMES

- * Learned HTML, CSS, and JavaScript development.*
- * Improved understanding of user interaction and event handling.*
- * Gained experience in quiz application development.*
- * Learned score calculation and dynamic content rendering.*
- * Enhanced debugging and problem-solving skills.*

11. CONCLUSION

The Online Quiz Management System successfully automates the quiz process and provides instant evaluation of user responses. The project achieved its objectives by offering an interactive, user-friendly, and efficient quiz platform. It reduces manual effort and improves the overall assessment experience.
